

Massachusetts Safety and Health Consultation Program

Information and Assistance on Workplace Safety Requirements

Overview

The Massachusetts Safety and Health Consultation Program offers free consultation services to help employers identify and control safety and health hazards at their worksites, improve their safety and health programs, and assist employees with workplace safety practices.

How It Works

The program is available to employers at management's request by calling (617) 969-7177. Consultants can meet with you at your workplace or provide technical assistance by phone. The goal is to provide information and assistance that leads to a safer worksite and helps your business come into compliance with federal Occupational Safety and Health Administration (OSHA) standards.

Advantages

As an employer, you can benefit from our professional expertise which will, in turn, help you reduce operating costs. The Massachusetts Business Resource Team can connect you to the Massachusetts Consultation Program that can help you lower worker's compensation costs and increase production and employee morale which can result in lower absenteeism and reduce employee occupational injuries and illnesses.

Eligibility

Massachusetts companies must be deemed as high hazard industries; which generally includes construction, manufacturing, healthcare and other general industry sites.
